

gimli-examples

This is a collection of markup files converted to pdf using gimli.
The markup files is stored in the root folder and the pdf output is saved in build.

I use [guard-gimli](#) to build the files when changed.
The default guardfile is used but modified to output to build, see the Guardfile

```
guard 'gimli', :outputdir => 'build' do
  watch(%r{.+\. (md|mkdn?|mdown|markdown|textile|creole|(media)?wiki)})
end
```

Styles

I have a custom stylesheet the orgmode example to define the table style.
To build the orgmode example use

```
$ gimli -f table.org -o build -s table.css
```

You can also add a stylesheet to the guard like this

```
guard 'gimli', :outputdir => 'build', :stylesheet => 'table.css' do
  watch(%r{.+\. (org)})
end
```
